

MULTI-CANDELA EMERGENCY STROBE LIGHT

ABSTRACT OF THE DISCLOSURE

5 A jumper, by its insertion at a particular position of a circuit board, selects
one of plural strobe intensities. The jumper includes a flag listing available strobe
intensity values. The flag is seated in a pocket when the jumper is inserted onto
the circuit board, one face of said pocket comprising a viewing slot. The selected
strobe intensity value on the jumper flag is observable through the viewing slot
10 during normal operation of the visual notification appliance.
